

## 7-day NaCl toxicity test conducted in a water bath

**Test beaker**  
containing 200 mL  
of water and 3 mL  
of sand substrate

**NaCl solutions**

**Replicate beakers**

**Splitter unit used  
to renew water for  
4 replicates per  
concentration**

**Manifold:** silicone stoppers  
with needle inserts

Figure S1. Setup of short-term 7-d toxicity test with juvenile fatmucket (*Lampsilis siliquoidea* ).

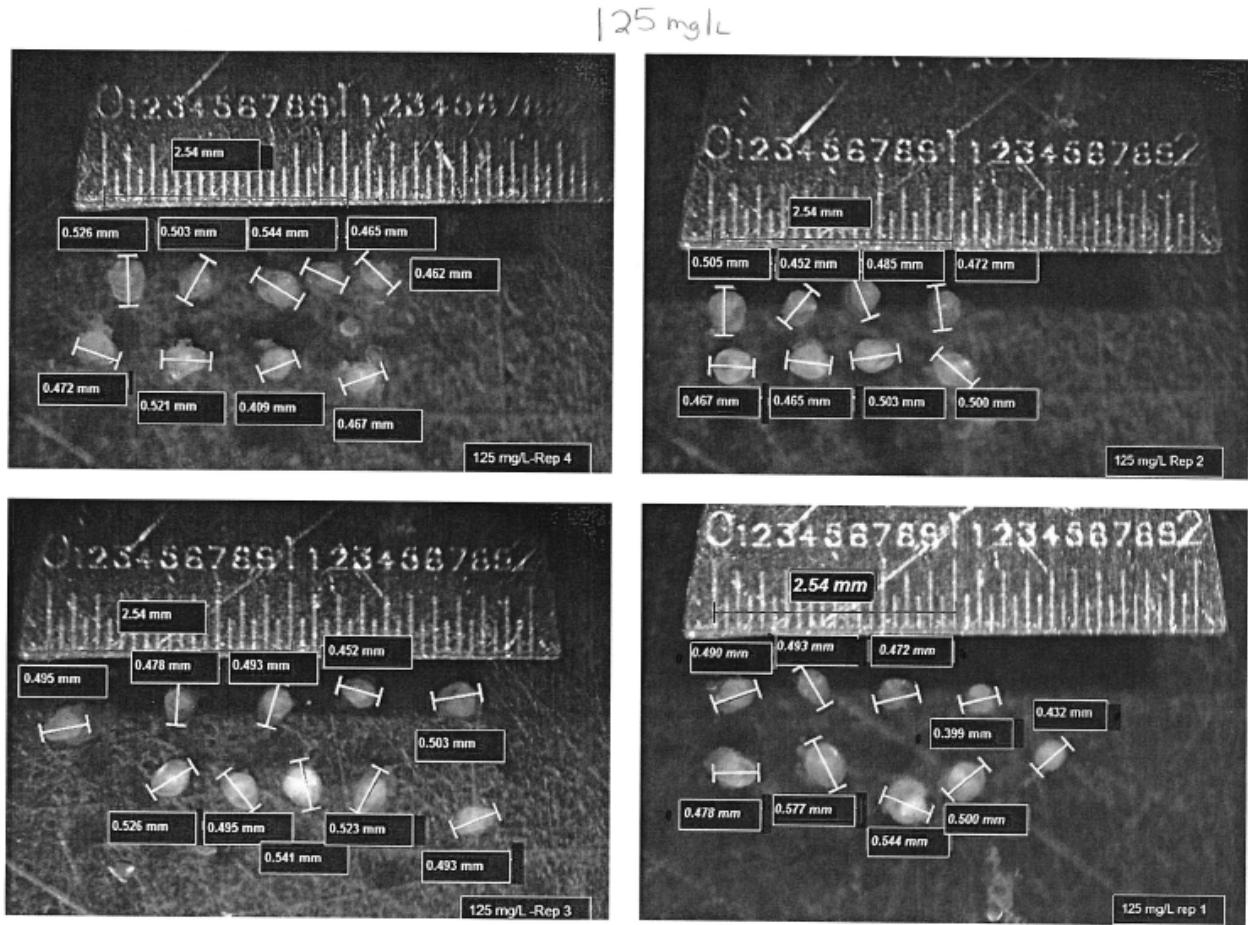

Figure S2. An example of length measurements of surviving mussels from the 4 replicates in the 125 mg NaCl/L treatment using a digitizing system (M Garton, Great Lake Environmental Center, Traverse City, MI, USA).

Table S1. Nominal concentrations of the 6 chemicals in 2 mock effluents for the 7-d test with cladoceran (*Ceriodaphnia dubia*), fathead minnow (*Pimephales promelas*), and notched rainbow (*Villosa constricta*) in USEPA moderately hard reconstituted water

*Mock effluent 1: The concentration in the 12.5% dilution (except for lead in the 25% dilution due to low solubility) was set at the USEPA chronic water quality criterion for each of the 6 chemicals for the water quality characteristics of the moderately hard reconstituted water (see text)*

Conc. (µg/L)	Control	3.125%	6.25%	<b>12.5%</b>	25%	50%	100% <sup>a</sup>
Ammonia	Control	250	500	<b>1000</b>	2000	4000	8000
Cadmium	Control	0.06	0.13	<b>0.25</b>	0.5	1.0	2.0
Copper	Control	0.38	0.75	<b>1.5</b>	3	6.0	12
Nickel	Control	13	26	<b>52</b>	104	208	416
Lead	Control	0.31	0.63	1.25	<b>2.5</b>	5.0	10
Zinc	Control	30	60	<b>120</b>	240	480	960

*Mock effluent 2: The concentration in the 12.5% dilution (except for lead in the 25% dilution due to low solubility) was set at the concentration close to chronic effect concentrations for unionid mussels (*Lampsilis siliquoidea* and *Villosa iris*) in previous 28-d exposures at hardness ~100 mg/L, dissolved organic carbon ~0.5 mg/L, pH ~8.3, and 20 to 22°C (Wang et al. 2010, 2011ab; Besser et al. 2011)*

Conc. (µg/L)	Control	3.125%	6.25%	<b>12.5%</b>	25%	50%	100% <sup>a</sup>
Ammonia	Control	100	200	<b>400</b>	800	1600	3200
Cadmium	Control	2.0	4.0	<b>8.0</b>	16	32	64
Copper	Control	2.0	4.0	<b>8.0</b>	16	32	64
Nickel	Control	11.5	23	<b>46</b>	92	184	368
Lead	Control	5.5	11	22	<b>44</b>	88	176
Zinc	Control	31	62	<b>124</b>	248	496	992

<sup>a</sup> *C. dubia* and notched rainbow were not tested in 100% effluent (see text).

**Table S2. Summary of test conditions for conducting the short-term 7-d toxicity tests with juvenile fatmucket (*Lampsilis siliquoidea*)**

<b>Test chemical</b>	NaCl
<b>Test type</b>	Static renewal
<b>Test duration</b>	7 days
<b>Temperature</b>	25±1°C
<b>Light quality</b>	Ambient laboratory light
<b>Light intensity</b>	10-20 µE/m <sup>2</sup> (~500-1000 lux)
<b>Photoperiod</b>	16L:8D
<b>Test chamber size</b>	300 mL (3 mL of silica sand, ~0.2 mm particle size)
<b>Dilution water</b>	Moderately hard reconstituted water (see text)
<b>Test solution volume</b>	200 mL
<b>Renewal of solution</b>	Daily (~80% replacement of water)
<b>Age of test organism</b>	~1 week after transformation
<b>No. Organism/Replicate</b>	10
<b>Replicates/Treatment</b>	4
<b>Feeding</b>	2 mL of algal mixture twice daily. The mixture prepared daily by adding 0.5 mL of Nanno 3600 <sup>tm</sup> and 1 ml of Shellfish Diet 1800 <sup>tm</sup> (Reed Mariculture, Campbell, CA) into 900 mL of control water
<b>Chamber cleaning</b>	None
<b>Aeration</b>	None
<b>Dilution factor</b>	0.5
<b>Test concentration</b>	Control, 125, 250, 500, 1000, and 2000 mg NaCl/L
<b>Chemical analysis</b>	Chloride measured in all concentrations on Days 0 and 7. Conductivity measured daily in each of new test solutions and in each old solution after 24-h exposure
<b>Water quality</b>	Temperature, pH, and DO measured in the control, medium, and high concentrations at the beginning and end of each 24-h exposure. Hardness, alkalinity, and ammonia measured in the control, medium, and high concentrations on Days 0 and 7
<b>Endpoint</b>	Survival and growth (shell length)
<b>Test acceptability criterion</b>	≥ 80% survival in controls

3-wk old	24.7 $\pm$ 0.2 (24.4-24.8)	8.0 $\pm$ 0.2 (7.9-8.3)	8.2 $\pm$ 0.1 (8.1-8.3)	113 $\pm$ 6.8 (100-120)	101 $\pm$ 8.7 (90-110)	0.19 $\pm$ 0.14 (0.02-0.34)

<sup>a</sup> Water temperature was measured twice daily during the test and water quality was measured at least in the control, medium, and high NaCl concentrations at the beginning and the end of each test. Mean conductivities measured in the control and 5 NaCl concentrations (nominal 0, 125, 250, 500, 1000, and 2000 mg NaCl/L) were 260, 481, 714, 1188, 2169, 3825  $\mu$ S/cm for the 1-wk-old mussel test, 253, 513, 746, 1185, 2149, 3891  $\mu$ S/cm for the 2-wk-old mussel test, and 266, 509, 742, 1182, 2146, 3900  $\mu$ S/cm for the 3-wk-old mussel test.

TAN=total ammonia nitrogen.

Table S8. Regressions estimating 20% effect concentrations (EC20s; mg Cl/L) and 95% confidence limits in 7-d NaCl exposures with different age groups of fatmucket (*Lampsilis siliquoidea*). Each circle indicates the measured response in each of the 4 replicates, and the line represents the nonlinear regression fit. When insufficient data were available to support adequate analysis by Toxicity Relationship Analysis Program (Erickson 2015), a regression line is highlighted in red and the EC20 is used only for exploratory data analysis

<sup>a</sup> The water quality were measured at least in the control, medium, and high treatments at the beginning and the end of the tests. The temperature, dissolved oxygen, and pH were also measured during the tests before and after daily water renewal.

<sup>b</sup> A less-than value is presented when ammonia concentration was below the detection limit.

TAN=total ammonia nitrogen; NM = not measured.

Table S10. Interlaboratory study Lab 1: Mean survival, shell length, and estimated dry weight (n=4) of fatmucket (*Lampsilis siliquoidea*) in the 7-d NaCl test

Nominal NaCl (mg/L)	Nominal Cl (mg/L)	Measured Cl (mg/L; n=2)	Conductivity ( $\mu$ S/cm; n=14)		Survival (%)		Length (mm) <sup>a</sup>		Dry weight ( $\mu$ g) <sup>a</sup>	
			Mean	SD	Mean	SD	Mean	SD	Mean	SD
Control	Control	7.5	304	21	100	0	NR		NR	
125	76	88	550	30	98	5.0	NR		NR	
250	152	176	787	38	100	0	NR		NR	
500	303	323	1266	55	95	5.9	NR		NR	
1000	607	628	2191	90	98	5.0	NR		NR	
2000	1214	1264	3992	153	100	0	NR		NR	
NOEC					NA				NC	NC
LOEC					>1264				NC	NC
IC25 (95% CL)					>1264				NC	NC

<sup>a</sup> The growth data are not reported because the shells of 2 or more surviving mussels in most replicates were crushed and could not be measured (see text).

NR=not reported; NOEC=no observed effect concentration; LOEC=lowest-observed-effect concentrations; IC25=25% inhibition concentration; CL=confidence limits; NC=not calculated; NA=not applicable.

Table S11. Interlaboratory study Lab 2: Mean survival, shell length, and estimated dry weight (n=4) of fatmucket (*Lampsilis siliquoidea*) in the 7-d NaCl test. Shaded cell indicates significant reduction relative to the control within a column (Dunnett's test or Steel's many-one rank test, p<0.05)

Table S20. Interlaboratory study Lab 11: Mean survival, shell length, and estimated dry weight (n=4) of fatmucket (*Lampsilis siliquoidea*) in the 7-d NaCl test. Shaded cell indicates significant reduction relative to the control within a column (Dunnett's test or Steel's many-one rank test, p<0.05)

Nominal NaCl (mg/L)	Nominal Cl (mg/L)	Measured Cl (mg/L; n=2)	Conductivity (µS/cm; n=14)		Survival (%)		Length (mm)		Dry weight (µg)	
			Mean	SD	Mean	SD	Mean	SD	Mean	SD
Control	Control	3.1	350	19	100	0	0.381	0.015	5.34	0.60
125	76	98	600	15	100	0	0.377	0.008	5.15	0.32
250	152	156	852	23	Nra		0.359	0.021	4.53	0.73
500	303	285	1328	32	100	0	0.360	0.007	4.48	0.23
1000	607	569	2262	83	NR <sup>a</sup>		0.354	0.003	4.28	0.09
2000	1214	1123	4041	152	NR <sup>a</sup>		0.342	0.016	3.92	0.48
NOEC					NC		285		285	
LOEC					NC		569		569	
IC25 (95% CL)					NC		>1123		957 (251-1068)	

<sup>a</sup> One or more replicates had a low recovery of mussels (≤50%) and survival was not reported.

NOEC=no observed effect concentration; LOEC=lowest-observed-effect concentrations; IC25=25% inhibition concentration; CL=confidence limits; NC=not calculated; NR=not reported.

Table S21. Interlaboratory study Lab 12: Mean survival, shell length, and estimated dry weight (n=4) of fatmucket (*Lampsilis siliquoidea*) in the 7-d NaCl test. Shaded cell indicates significant reduction relative to the control within a column (Dunnett's test or Steel's many-one rank test, p<0.05)

Nominal NaCl (mg/L)	Nominal Cl (mg/L)	Measured Cl (mg/L; n=2)	Conductivity ( $\mu$ S/cm; n=14)		Survival (%)		Length (mm)		Dry weight ( $\mu$ g)	
			Mean	SD	Mean	SD	Mean	SD	Mean	SD
Control	Control	4.6	304	11	95	5.8	0.405	0.006	6.23	0.19
125	76	77	558	20	80	12	0.412	0.002	6.48	0.12
250	152	164	806	23	88	13	0.403	0.011	6.08	0.41
500	303	303	1299	35	93	15	0.406	0.019	6.23	0.78
1000	607	603	2259	62	80	20	0.382	0.022	5.32	0.80
2000	1214	1205	4096	48	73	10	0.332	0.008	3.64	0.17
NOEC					603		603		603	
LOEC					1205		1205		1205	
IC25 (95% CL)					>1205		>1205		758 (534-850)	

NOEC=no observed effect concentration; LOEC=lowest-observed-effect concentrations; IC25=25% inhibition concentration; CL=confidence limits.

Table S22. Interlaboratory study Lab 13: Mean survival, shell length, and estimated dry weight (n=4) of fatmucket (*Lampsilis siliquoidea*) in the 7-d NaCl test

Nominal NaCl (mg/L)	Nominal Cl (mg/L)	Measured Cl (mg/L; n=2)		Conductivity (µS/cm; n=7)		Survival (%) <sup>a</sup>		Length (mm) <sup>a</sup>		Dry weight (µg)	
		Day 0	Day 6	Mean	SD	Mean	SD	Mean	SD	Mean	SD
Control	Control	16	16	186	5.0	100	0	0.483	0.004	10.07	0.35
125	76	18	66	308	71	98	5.0	0.488	0.015	10.26	0.77
250	152	20	116	448	143	100	0	0.488	0.004	10.31	0.15
500	303	20	198	670	255	95	9.1	0.481	0.010	9.82	0.55
1000	607	24	374	1177	513	83	5.8	0.490	0.013	10.36	0.73
2000	1214	20	759	2133	995	87	10	0.474	0.024	9.54	1.26
NOEC						NC <sup>b</sup>		NC		NC	
LOEC						NC <sup>b</sup>		NC		NC	
IC25 (95% CL)						NC		NC		NC	

<sup>a</sup> The 7-d test ended on test day 6 by mistake. Survival and growth data were based on the 6-d exposure.

<sup>b</sup> Effect concentrations were not calculated because the exposure concentrations were not consistent over the test period and far below the nominal concentrations in most cases.

NOEC=no observed effect concentration; LOEC=lowest-observed-effect concentrations; IC25=25% inhibition concentration; CL=confidence limits; NC=not calculated.
