

Introduction to the database:

The accompanying database contains the data associated with an EPA funded study of the effects of offshore dredge spoil disposal. Sites offshore of Oregon's Yaquina Bay were sampled using benthic box-core samplers. Species present in the samples were identified and enumerated. Full details of the study are available Marine Taxonomic Services Ltd. (2022).

The following pages document the contents of the Access database. It is recommended that persons interested in this data first view the table relationships contained in the database. The database was constructed as follows:

1. Data on marine benthic infauna was obtained from the web site [World Register of Marine Species](#) (WoRMS). Each taxonomic entry in the WoRMS database is indexed by an "AphiaID", which is unique number assigned to that taxon. The downloaded information is contained in the database table **WormsAphias**.
2. The data from the Yaquina dredge samples was partitioned into multiple tables as follows:
 - a. Dredge samples were taken at two locations, identified as tables **NorthODMDS** and **SouthODMDS**. The data from these tables was partitioned into three tables:
 - i. Table **YaquinaTaxa**, which holds the taxon names and supplemental information provided in the above cited report.
 - ii. Table **YaquinaStations**, which holds the sample station identification information.
 - iii. Table **Counts**, which holds the count of animals collected at each station.
3. The WoRMS database also provides information about the "attributes" of each taxon. Attribute data for the Yaquina taxa were also downloaded and partitioned into multiple

tables. The data provided by WoRMS is sent as a JSON files. The hierarchical JSON files were partitioned based on the hierarchy, with the top level named **AphiaAttributes1**, the child of this table named **AphiaAttributes2**, up to **AphiaAttributes6**. The data in these tables was then partitioned into individual tables, one for each unique attribute. Examples of taxon attributes are Body Size, Life Stage, Functional Group, Feeding Type, etc. WoRMS also provides literature references for the taxa, and these are contained in the table **AttributeReferences**, which is linked to the **WormsAphias** table by the AphiaID value.

The following pages were obtained using the Access database documenter utility, and describe in detail the contents of each table, the fields in each table, and the relationships among tables. The document contains bookmarks to important tables.
